Subject:	Eliminate the 'global data' objects in Silo		
Description:	<p>There are a few global data members in Silo that cause information to be remembered from one object to the next. This is just a bad idea and should be eliminated from Silo.</p> <p>A similar argument holds for cycle, time and dttime data members.</p> <p>The rationale for this is that I routinely encounter users having problems because of the issues this creates</p>
