Subject:	Add a var() function, that takes a string to the expression language		
Description:	<p>Some var names cases are still tough to write, for example:</p> <p>path/to/var<that already has chevrons></p> <p>Should we use?</p> <p><path/to/var<that already has chevrons>>?</p> <p>This would be easier:</p> <p>var("path/to/var <that has chevrons>")</p>
