Subject:	Make it easier to create time history plots from picks.		
Description:	<p>Right now it is fairly complicated to create a time history plot from a pick point. To the best of my knowledge, the user would do a pick, get the node, zone or coordinate from the pick output window, bring up the query window and select the pick query, enter the pick information, select query over time and then press the query button.</p> <p>It would be nicer if the user just clicked on the point and it made the time history plot using some options. Perhaps from a right click pulldown menu.</p> <p>Paul Amala suggested this.</p>

- Status changed from New to Pending

Apparently there is a control in the pick window to specify that the next pick should do a pick over time. This should be placed in a more prominent location in the GUI.
