Subject:	Install extra color tables for LLNL installations		
Description:	<p>Mike Zika explained he is doing more work folks at other sites using tools other than VisIt and he needs the ability to produce comparable images with VisIt. A key factor is getting the color tables to match up. He has an interest in installing other tool's color tables in public VisIt installs so that anyone using VisIt will have access to them.</p> <p>This will likely only work with LLNL-specific installs. In addition, due to an increase in number of color tables, it could require either that we prepend <toolname>_<colortable-name> to external tool's tables or that we opt for a more hierarchical view of the namespace of available colortables in VisIt's GUI widgets that interact with the list of color tables.</p>
