

VisIt - Bug # 1242: 'advanced' bv options miss-handled or miss-named

Status:	Pending	Priority:	High
Author:	Mark Miller	Category:	
Created:	11/15/2012	Assigned to:	
Updated:	11/28/2012	Due date:	
Likelihood:	3 - Occasional		
Severity:	3 - Major Irritation		
Found in Version:	2.5.2		
OS:	All		
Support Group:	Any		
Subject:	'advanced' bv options miss-handled or miss-named		
Description:	<p>Hari recently mentioned a problem with itaps on his system. I advised to make itaps optional and not part of --all-io.</p> <p>I went looking for what happened to itaps and found this in bv_support/modules.xml</p> <pre><pre> <group name="advanced" comment="Must be manually downloaded"> <lib name="mili"/> <lib name="visus"/> <lib name="mdsplus"/> <lib name="tcmalloc"/> <lib name="itaps"/> <lib name="hdf4"/> </group> </pre></pre> <p>and concluded something is a miss either with what the 'advanced' group is supposed to be or with the comment or both. All the products listed here save mili are all open source I think. Certainly, tcmalloc, hdf4, itaps, mdsplus are. So, while we may want to consider these 'advanced', the 'must be manually downloaded' is not appropriate for these and in particular, I want build_visit to download them for me if I request them.</p>
