<b>Subject:</b>	matnames not handled consistently in Silo plugin between multiblock and singleblock cases		
<b>Description:</b>	<p>Brian Ryujin reported this.</p> <p>Brian and Esteban have each added material names to their code's multi-mat outputs. However, Brian reported that it would not work for him on the multi-block object and he needed to put them on an individual block and Esteban had the opposite experience.</p> <p>I suspect this could have to do with whether or not each included some other optlist options that must be present to support the DBOPT_MATNAMES option but we should investigate this.</p>
