<b>Subject:</b>	Changing background color, "parallel rendering" text switches color early		
<b>Description:</b>	I was updating a volume rendering that was using parallel rendering. When I switched the background color from black to white, the "waiting for parallel rendering" text switched to black before the image updated, so I couldn't see it. Once the image updates to a white background, the black text is fine. The only fix is to leave the text color the same until the background color switch is done.		

### History

#### 02/19/2013 04:02 pm - Eric Brugger

- Status changed from New to Pending
- Likelihood changed from 5 - Always to 3 - Occasional

Changing the likelihood to 3, since it represents the likelihood a user will encounter the bug, rather than the reproducibility of the bug.
