Subject:	Hitting 'X' WM button to close viewer window (and exit VisIt) causes abnormal viewer abort		
Description:	<p>When I hit the 'X' button to close the viewer window (#1, only window I have), VisIt does exit but it also prints...</p> <p>VisIt's viewer exited abnormally! Aborting the Graphical User Interface. VisIt's developers may be reached via the visit-users mailing list. Please see: http://visit.llnl.gov/FAQ.html#1</p> <p>This way of exiting VisIt used to not be supported at all but I kinda like support it if it really should work.</p>
