Support Group:	Any		
Subject:	build_visit discrepancy with visit defaults for slivr		
Description:	<p>VISIT_SLIVR is turned on by default for a visit build.</p> <p>build_visit assumes a default of 'off', and only sets a flag if --slivr is used, turning it on.</p> <p>If '--slivr' is NOT used, no VISIT_SLIVR flag is sent to Visl's cmake configure to turn it off, and thus it remains ON by default.</p> <p>A customer ran into this attempting to build using --server-components-only.</p>
