<b>Subject:</b>	would like silodiff-like option in silex / refactor diffing from browser		
<b>Description:</b>	<p>cq-id: Vislt00007580 cq-submitter: Mark Miller cq-submit-date: 10/31/06</p> <p>A user mentioned that when there are a lot of differences to examine between Silo files, browser's output is difficult to digest. This user mentioned that the ability to do graphical diffs in Silex would be very useful.</p> <p>Alternatively, we could improve browser's output to facilitate reading the diffs a bit better.</p>		

### History

#### 10/06/2010 07:08 pm - Mark Miller

- Subject changed from *would like silodiff-like option in silex* to *would like silodiff-like option in silex / refactor diffing from browser*

Al Nichols requested a way to run silex such that it operates on 2 input dbs and then displays ONLY those objects in the menus that contain differences (or could switch to display only those that are same) and when you click on things, you get side-by-side windows of both dbs all the time.

This would require either re-factoring diffing engine from browser.
