Subject:	should write API be sensitive to force single setting?		
Description:	<p>cq-id: Vislt00007812 cq-submitter: Mark Miller cq-submit-date: 02/21/07</p> <p>Currently, Silo's DBForceSingle flag is used only by the read API. Data is automatically converted from double to single precision.</p> <p>Why don't we support it on the write part of the API? It would save users of Silo wanting to write 'plot' files a lot of extra hassle converting their data from double to single precision to write plot files.</p>
