Subject:	Add transform information to silo curve object.		
Description:	<p>Al Nichol's request:</p> <p>Currently ALE3D writes out its table data as a silo curve. Some of the curves are $y(x)$, some are $x(y)$, some are $r(t)$. Visit has transforms that can be used to plot these curves properly on an x-y plane. I would like to associate the correct transformation with the curve so that the user doesn't have to do it in visit.</p>
