<b>Subject:</b>	silex installed on juno doesn't work out of the box.		
<b>Description:</b>	Lila chase called me and was trying to run silex on juno and not being very successful. I found silex in /usr/gapps/silo/4.8/chaos_4_x86_64/bin and when I ran it I got an error that it couldn't find the shared library libQtGui.so.4. I then set my LD_LIBRARY_PATH so that it pointed at /usr/gapps/visit/qt/4.6.1/linux-x86_64_gcc-4.1/lib and then it worked. This should be simpler. Adding and rpath when it is linked will probably fix the problem.
